(54) Title: **CANISTER PIERCER**

(57) Abstract: This invention provides a method of analysing the contents of a pressurised container, such as a pressurised metered dose inhaler canister. This method comprises the steps of: enclosing said container in a pressure vessel and then pressurising the pressure vessel with a non-reactive fluid. The pressurised container within the pressure vessel is then pierced and the contents removed and analysed. The invention also consists of a device to carry out such a method.
